## 1. Air activity and aircraft observed at Wormeuchen sirfield:

Between 0950 and 1500 on 31 James 1955, a total of 39 twin-jet aircraf 25X1 were observed at the field, including 7 in the southwestern corner, -26 in front of the hangars Hee 2 through 5, 3 east of hangar He 6 and 3 in the revenuents on the marthurn edge of the field. Bix of the 7 aircraft in the southwestern cornered the field were covered with terpenline. The uncovered plane had a lighter soler than previously observed on twin-jet aircraft. It had a full-wiew cockpit.

A truck towed the 3 Il-28s from the 25X1 revetments at the northern edge of the field to the site in front of the 25X1 hangars Nos 2 through 5. had full-view cockpits and the fellowing crews: two planes 25X1

1 man sitting on the cockpit and looking forward

25X1 1 man in the esckpit on upper side of fuselage, with view to the fore (only his head was visible).

1 man sitting in tail gunner's station, with view to the rear

There was no air activity during the period of observation. 1

## 2. Radio and radar installations:

No change was observed on the radio installations east of the field, the PKW-45 DF station and single-mast radio installations with radio trucks. Two radio trucks were again parked south of the eastern end of the runway. One of these radio trucks had a mast, 7 to 8 meters high, with an egg-shaped device on top. This device was 60 to 70 cm high and about 25 cm in diameter. The mast of the second radio truck was about 6 meters high. It mounted an egg-shaped device which was slightly smaller than that of the other mast, namely about 40 on high and about 15 on in diameter. A one-axle trailer, presumably a generator, was seen next to the radio trucks. He cable connections were seen. The Eniferst-type and Fishnet-type radar sets were still observed at their previous locations. The model AA 4 MK 3 radar set was stistill seen south of revetment He 2. 2 Nodex

gun emplacement in the northwestern corner of the field. The llowing device was dug in approximately in the middle of the gun emplacement A retatable tube, about 4 meters long and 25 in diameter, was fitted on a selid pedestal. The device was operated a man for when a seat, presumably a part of the set was provided.  a man for when a seat, presumably a part of the set was provided. The sent was provided as man for when a seat, presumably a part of the set was provided.  a man for when a seat, presumably a part of the set was provided.  a man for when a seat, presumably a part of the set was provided.  a man for when a seat, presumably a part of the set was provided.  Black and the work in the fuel dump in the northwestern section of the field at presumably been discontinued. Heaps of earth were seen there and contain the lying on the ground.  Comment. Although only 39 aircraft were seen. The believed that presumben airfield is still occupied by 2 bender regiments equipped with 1-28s. Additional aircraft were probably parted in the thankars. Furthermore, it is assumed that some Il-28s have special missions. In late Jaminary 1955, 1-28s from Wittstock were involved in army exercises and also engaged in ombing over the Schweinrich treep training grounds.  Comment. The statements on the radio and radar installations have been prifted with minor differences. It is believed that the Al pretaction at armounden airfield consists of 1 battery of 76-mm guns, 2 batteries of 37-mm and some four-barreled guns. The description of the unidentified device on the northwestern Al gun emplacement indicates that it is a model En 4m R tereoscepic range finder which is used in commettee with the model Pusses. A gun director.    Install the present report indicates that werk was execution on the ground. The present report indicates that werk then early large on the ground.
